Git+Github+Rstudio instructions

Part 1: Installation and setup

1. Installation:

Git (Download Git): Download and install Git.

GitHub account: On GitHub create yourself a free GitHub account.

2. Setup Git in RStudio: Tell RStudio where to find the Git installation.

- Open RStudio and go to Tools > Global Options… click on Git/SVN

- Check Enable version control interface for RStudio projects

- Set the path to the Git executable, if you don't know where Git is.

In Windows> cmd> where git

In Rstudio>ternimal>where git

The path should be something like: C:/Program Files (x86)/Git/bin/git.exe

3. Setup Git: Configure Git and set your *user name* and *email.* You can directly open the Git prompt from within RStudio.

git config --global user.name 'yourGitHubUsername'

git config --global user.email 'name@provider.com'
